

FESTO

To whom it may concern

After eight years of successful business cooperation we found NK Automatyka as a team of experts who find sophisticated solutions and support our customers during the entire project.

NK Automatyka develops and builds for Festo highly specialized or non-existent prototypes and production machines from concept. They add value through their experience and knowledge of control system design, machinery fabrication, automation and vision systems. They are experts at taking our concept or machine prototype and proving viability in state-of-the-art fabrication plants.

Festo Poland as a part of world's leading supplier of automation technology can confirm the reliability and expertise of NK Automatyka.
